Technical Skills

Languages	JavaScript (ES6+), TypeScript, Python, SQL
Frontend	React, Next.js, Tailwind CSS, HTML5, CSS3, Responsive & Mobile-First Design
Backend & APIs	Node.js, GraphQL, Hasura, REST APIs
Authorization & Security	Permit.io, RBAC, ReBAC, OTP Authentication
Databases	PostgreSQL, MySQL
AI & NLP	Natural Language Query (NLQ), Conversational Interfaces, LLM Integration
Testing	Jest, React Testing Library, Unit & Integration Testing
Integrations	GitHub API, Google Calendar API, WhatsApp Business API
Tools & Platforms	Git, Linux, D3.js, Azure AI, Google Analytics

Professional Experience

Umrain

2025 – 2026

Founder

Bengaluru, India

- Founded a **travel-tech startup** enabling travelers to plan and book their Umrah independently and transparently—without traditional agents—and drove **~\$40K in first-year revenue** as a bootstrapped, solo-built venture.
- Built a **self-serve platform** that generates fully customized, end-to-end (home-to-home) Umrah itineraries tailored to each traveler's preferences, budget, and schedule.
- Owned **product, technology, operations, vendor partnerships, and customer support** end to end, developing deep expertise across supplier and ground logistics, pricing, compliance, and building customer trust in a high-stakes journey.

Karya

Sep 2024 – Present

Senior Product Engineer

Bengaluru, India

- Architected and delivered a **zero-trust authorization system** with Permit.io RBAC/ReBAC across **100+ API routes**, enforcing fine-grained access policies for 5 distinct personas (Project Managers, Ground Coordinators, Finance, Support, QA); shipped a **self-serve role-management UI** that empowered admins to assign, update, and revoke roles in real time without engineering intervention—**cutting access-provisioning time from hours to seconds** and eliminating all manual database privilege changes.
- Spearheaded **enterprise client onboarding** for Karya's PaaS platform; led end-to-end technical discovery, scoped integration architectures, and managed production deployments—bridging sales and engineering to accelerate client time-to-value.
- Designed and shipped a **Natural Language Query (NLQ)** conversational interface enabling non-technical stakeholders to query live PostgreSQL databases in plain English; engineered persistent chat history, reusable query templates, and a responsive data table with auto-resizable columns—**removing SQL dependency for all end users**.
- Built **25+ modular, accessible task components** for structured data-collection pipelines supporting voice input, touch interaction, and selection tasks—improving field accessibility for workers in low-bandwidth, low-literacy environments.
- Engineered upload and date-range filtering in the **payments module** and resolved critical report re-rendering defects, enabling faster and more accurate worker-payout management for ground coordinators.
- Integrated the **WhatsApp Business API** for broadcast task distribution and automated assignment notifications—extending task-delivery reach to large worker pools through a high-engagement, familiar channel.
- Resolved OTP authentication for test accounts and international phone formats (e.g., Ethiopian country codes), ensuring reliable verification flows and enabling **multi-country platform expansion**.

ZopSmart

Jan 2022 – Aug 2024

Software Engineer

Bengaluru, India

- Kroger (US Grocery e-Commerce)**: Core contributor to the homepage and navigation architecture of the **2nd-largest US grocery e-commerce SaaS**; redesigned category-discovery flows that increased click-through rate by **3×** and drove a **12% lift in product sales**. *Stack: TypeScript, React, CSS, Jest, React Testing Library.*
- EazyUpdates (Task-Management SaaS)**: Engineered a leave-management and payroll-tracking module for HR teams that substantially reduced manual overhead; integrated **GitHub and Google Calendar APIs** for real-time employee-progress visibility, owning **50% of the total product build**. *Stack: TypeScript, React, CSS, Jest.*
- Smrize (Productivity SaaS)**: Built a mobile-first book-summarization platform with native audio playback; optimized mobile rendering performance to achieve a **20% traffic increase** and **24-minute average daily sessions** per user.

Stack: JavaScript, Next.js, Tailwind CSS.

- **Confluence (Social Hiring Platform):** Architected and built a creator-monetization and social-hiring platform from the ground up; designed scalable **GraphQL schemas and relational data models** for creator-to-employer workflows. *Stack: Next.js, Tailwind CSS, GraphQL, Hasura, PostgreSQL.*
- **HealthCheck (Internal DevOps Tool):** Architected and shipped a cross-service health-monitoring dashboard integrating with all backend services to surface real-time status, dependency health, and usage metrics; visualized inter-service relationships as a **D3.js force-directed graph**—giving every team instant visibility into service availability and reducing mean time to detect (MTTD) degradations. *Stack: React, D3.js, Node.js.*

MountBlue Technologies

Aug 2021 – Jan 2022

Software Engineer

Bengaluru, India

- Completed an intensive full-stack engineering program covering industry-standard component architecture, frontend best practices, **test-driven development (TDD)**, and production deployment pipelines.
- Shipped a production-grade **e-property listing marketplace** enabling landlords to list properties and tenants to browse and enquire—delivered a fully responsive, accessible UI with comprehensive unit and integration test coverage. *Stack: React, Tailwind CSS, Bootstrap, Jest, React Testing Library.*

Developer Student Clubs, REVA University

Jun 2019 – Jun 2020

Core Team Member

Bengaluru, India

- Planned and executed technical workshops, hackathons, and coding events for the university developer community; held multiple leadership roles, coordinating cross-functional teams to ensure consistent, high-quality program delivery.

Projects & Publications

Road Accident Alert and Analysis System

REVA University, 2021

Published Research

- Designed and published a real-time road-accident detection system integrating sensor-based alerting with statistical trend analysis—targeting reduced emergency-response times and enabling data-driven public-safety decision-making.

Key Achievements

- Drove a **3× click-through-rate improvement** and **12% product-sales lift** on Kroger’s US e-commerce homepage—one of North America’s highest-trafficked grocery platforms.
- Shipped an **NLQ interface that removed all SQL requirements** for live database exploration, directly expanding data access to non-technical stakeholders across Karya’s platform.
- Onboarded enterprise clients—including teams working with **Anthropic, Microsoft, Google, and OpenAI**—onto Karya’s PaaS platform by bridging technical discovery and full integration delivery.
- Achieved **20% platform traffic growth** and **24-minute average daily sessions** on Smrize through mobile-first performance optimization, demonstrating strong product-market fit.
- Owned **50% of the complete EazyUpdates product build**, delivering an HR task-management and payroll module with multi-API integrations end-to-end.

Education

REVA University

Jun 2017 – Jul 2021

B.Tech, Computer Science

Bengaluru, India

Sri Chaitanya Techno School

May 2014 – Jul 2015

CBSE Class X — Mathematics & Computer Science

Bengaluru, India
