Delivery	Agile, Jira, Confluence, Git

Education

Degree	B.Tech, Computer Science
University	REVA University
Location	Bengaluru, India
Dates	2017 – 2021

Professional Experience

Karya — 2024 – Present

Senior Product Engineer — *Bengaluru, India*

Platform for large-scale data collection, task operations, and worker payments. Sprint planning, grooming, and reviews with operations, finance, support, and product.

- Owned **Platform by Karya** end to end. The product has deployed **65M+ tasks**, supports **70+ languages**, and runs in **6 countries** across the Global South.
- Published programs on that platform include **Project Vaani** with Google and IISc (**6,000 hours**, 24K+ speakers, 30 districts), **Project Apollo** (**100,000 hours** across 22 languages, 60,000 workers, **$2M** disbursed), **Samiksha** with Microsoft (**23,000+** real-world queries, **150,000+** human evaluations), and an **Anthropic** evaluation (**10,000** community queries, **30,000+** tasks, 7 languages).
- Turned task creation into configuration. **30+ components**, including audio transcription, image annotation, and fill-in-the-blanks, so operations can assemble a new data-collection task, including for low-bandwidth and low-literacy workers, without a new build.
- Owned **Task Preview** from the problem through launch. Wrote the PRD (user stories, locked decisions, non-goals) and aligned operations, finance, support, and product. **Every new task** now starts in Preview: operators validate it end to end, payouts stay off during testing, and promotion to Live runs in one transaction.
- Defined **Task Health** as the checklist on the task page: **7 automated checks** (assignments, microtasks, completion policy, upstream tasks, avatar linking, rejected work, and boxes). Each check opens the screen that fixes it, so coordinators clear blockers without an engineer.
- Replaced hand-edited database access with project roles and a self-serve UI. **4 global and 5 project roles**, permissions in code, across **100+ API routes**. Provisioning went **from hours to seconds**, and inactive users are denied.
- Shipped **plain-English queries** over live PostgreSQL, with history and reusable templates, so non-technical stakeholders can read operational data without writing SQL.

ZopSmart — 2022 – 2024

Product Engineer — *Bengaluru, India*

- **Kroger (US Grocery e-Commerce):** Shipped the homepage and category-discovery redesign on the **2nd-largest US grocery e-commerce SaaS**. Click-through rose **3**× and product sales rose **12%**.
- **EazyUpdates (Task-Management SaaS):** Built leave and payroll tracking for HR teams and integrated **GitHub and Google Calendar APIs** for live progress visibility, owning **50% of the product**.
- **Smrize (Productivity SaaS):** Shipped a mobile-first book-summary app with audio. Traffic rose **20%**, with **24-minute average daily sessions**.

MountBlue Technologies — 2021 – 2022

Software Engineer — *Bengaluru, India*

- Shipped a production-grade **e-property listing marketplace** enabling landlords to list properties and tenants to browse and enquire; delivered a fully responsive, accessible UI with comprehensive unit and integration test coverage.
