## TECHNICAL SKILLS

|                          |                                                                             |
|--------------------------|-----------------------------------------------------------------------------|
| Languages                | JavaScript (ES6+), TypeScript, Python, SQL                                  |
| Frontend                 | React, Next.js, Tailwind CSS, HTML5, CSS3, Responsive & Mobile-First Design |
| Backend & APIs           | Node.js, GraphQL, Hasura, REST APIs                                         |
| Authorization & Security | Permit.io, RBAC, ReBAC, OTP Authentication                                  |
| Databases                | PostgreSQL, MySQL                                                           |
| AI & NLP                 | Natural Language Query (NLQ), Conversational Interfaces, LLM Integration    |
| Testing                  | Jest, React Testing Library, Unit & Integration Testing                     |
| Integrations             | GitHub API, Google Calendar API, WhatsApp Business API                      |
| Tools & Platforms        | Git, Linux, D3.js, Azure AI, Google Analytics                               |

## PROFESSIONAL EXPERIENCE

### Karya | Senior Product Engineer

Sep 2024 – Present

Bengaluru, Karnataka, India

- Designed and delivered a **zero-trust authorization system** using Permit.io RBAC/ReBAC across **100+ API routes**, enforcing fine-grained access policies for 5 user personas (Project Managers, Ground Coordinators, Finance, Support, QA); built a **self-serve role management UI** empowering admins to assign, update, and revoke roles in real time without engineering intervention — cutting access provisioning time from hours to seconds and eliminating all manual database privilege changes.
- Spearheaded enterprise client onboarding for Karya's **PaaS platform**; led end-to-end technical discovery, scoped integration architectures, and managed production deployments — bridging sales and engineering to accelerate client time-to-value.
- Designed and shipped a **Natural Language Query (NLQ)** conversational interface enabling non-technical stakeholders to query live PostgreSQL databases in plain English; built persistent chat history, reusable query templates, and a responsive data table with auto-resizable columns — removing SQL dependency for all end users.
- Built **25+ modular, accessible task components** for structured data-collection pipelines, supporting voice input, touch interaction, and selection tasks — improving field accessibility for workers in low-bandwidth, low-literacy environments.
- Engineered upload and date-range filtering in the **payments module** and resolved critical report re-rendering defects, enabling faster and more accurate worker payout management for ground coordinators.
- Integrated **WhatsApp Business API** for broadcast task distribution and automated assignment notifications — extending task delivery reach to large worker pools via a high-engagement, familiar channel.
- Resolved OTP authentication for test accounts and international phone formats (e.g., Ethiopian country codes), ensuring reliable verification flows and enabling **multi-country platform expansion**.

### ZopSmart | Software Engineer

Jan 2022 – Aug 2024

Bengaluru, Karnataka, India

- Kroger (US Grocery e-Commerce)**: Core contributor to homepage and navigation architecture for the **2nd-largest US grocery e-commerce SaaS**; redesigned category discovery flows, increasing click-through rates by **3×** and driving a **12% lift in product sales**. *Stack: TypeScript, React, CSS, Jest, React Testing Library.*
- EazyUpdates (Task Management SaaS)**: Engineered a leave management and payroll tracking module for HR teams, substantially reducing manual overhead; integrated **GitHub and Google Calendar APIs** for real-time employee progress visibility. Owned **50% of the total product build**. *Stack: TypeScript, React, CSS, Jest.*
- Smrize (Productivity SaaS)**: Built a mobile-first book-summarisation platform with native audio playback; optimised rendering performance for mobile — achieving a **20% traffic increase** and average daily session engagement of **24 minutes per user**. *Stack: JavaScript, Next.js, Tailwind CSS.*
- Confluence (Social Hiring Platform)**: Architected and built a content-creator monetisation and social hiring platform from the ground up; designed scalable **GraphQL schemas and relational data models** for creator-to-employer workflows. *Stack: Next.js, Tailwind CSS, GraphQL, Hasura, PostgreSQL.*
- HealthCheck (Internal DevOps Tool)**: Architected and shipped a cross-service health monitoring dashboard

integrating with all backend services to surface real-time status, dependency health, and usage metrics; visualised inter-service relationships as a **D3.js force-directed graph** — giving every team instant visibility into service availability and reducing mean time to detect (MTTD) degradations from discovery to resolution. *Stack: React, D3.js, Node.js.*

MountBlue Technologies | Software Engineer

Bengaluru, Karnataka, India

Aug 2021 – Jan 2022

- Completed an intensive full-stack engineering programme covering industry-standard component architecture, frontend best practices, test-driven development (TDD), and production deployment pipelines.
- Shipped a production-grade **e-property listing marketplace** enabling landlords to list properties and tenants to browse and enquire — delivered a fully responsive, accessible UI with comprehensive unit and integration test coverage. *Stack: React, Tailwind CSS, Bootstrap, Jest, React Testing Library.*

Developer Student Clubs, REVA University | Core Team Member

Bengaluru, Karnataka, India

Jun 2019 – Jun 2020

- Planned and executed technical workshops, hackathons, and coding events for the university developer community; held multiple leadership roles, coordinating cross-functional teams to ensure consistent, high-quality programme delivery.

PROJECTS & PUBLICATIONS

Road Accident Alert and Analysis System

Published Research · REVA University, 2021

- Designed and published a real-time road accident detection system integrating sensor-based alerting with statistical trend analysis — targeting reduced emergency response times and enabling data-driven public safety decision-making.

KEY ACHIEVEMENTS

- Drove a **3× click-through rate improvement** and **12% product sales lift** on Kroger’s US e-commerce homepage — one of North America’s highest-trafficked grocery platforms.
- Shipped an NLQ interface that **removed all SQL requirements** for live database exploration, directly expanding data access to non-technical stakeholders across Karya’s platform.
- Onboarded enterprise clients — including teams working with **Anthropic, Microsoft, Google, and OpenAI** — onto Karya’s PaaS platform by bridging technical discovery and full integration delivery.
- Achieved **20% platform traffic growth** and **24-minute average daily sessions** on Smrize through mobile-first performance optimisation, demonstrating strong product-market fit.
- Owned **50% of the complete EazyUpdates product build**, delivering an HR task-management and payroll module with multi-API integrations end-to-end.

EDUCATION

REVA University

Bachelor of Technology — Computer Science · Bengaluru, India

Jun 2017 – Jul 2021

Sri Chaitanya Techno School

CBSE Class X — Mathematics & Computer Science · Bengaluru, India

May 2014 – Jul 2015

CERTIFICATIONS
